

Handy for picking up a metal part that has fallen in a hard-to-reach area. Its magnet and long, flexible shaft provide a wide range of movement.

The tool has a long, flexible shank that allows it to reach a length of 57cm. Capable of lifting up to 0.5kg, the flexibility of the shaft means it can be used to pick up workpieces in angular or curved areas. Finally, the handle has a contrasting smooth and serrated plastic for a better grip.
